

Requirements

This software requires a sufficiently updated version of Python 3. Linux shell scripts are provided to help run the code, but they are not strictly required. The scripts manage missing packages inside a virtual environment for you, however for the purpose of documentation the versions of the needed packages I had installed are listed as follows:

- scikit-learn 1.8.0
- pandas 2.3.3
- numpy 2.4.4
- torch 2.11.0
- nltk 3.9.4
